

TELESCOPING TARP HOUSING DIAGRAM AND INSTRUCTIONS

INSTALLATION

STEP 1: Measure and Prepare

1.) Measure the outside width of the dump truck body where the housing will be installed.

STEP 2: Assemble the Housing

- 1.) Slide the left side assembly and right side assembly into the middle sleeve as shown in the assembly diagram.
- 2.) Adjust both side assemblies equally until the overall outside width of the housing matches the measured outside width of the truck body.
- 3.) Ensure both side assemblies extend the same distance from the center sleeve so the housing remains centered on the truck.
- 4.) Position the middle connecting rail beneath the center sleeve and secure it using the supplied fixing brace(s).

STEP 3: Secure the Housing

- 1.) Once the correct housing width has been established, drill the required mounting holes through the housing and truck body.
- 2.) Secure the housing using the supplied mounting hardware.
- 3.) *Optional:* Install the two additional supplied fixing braces at the desired locations along the connecting rail to provide additional support and rigidity.
- 4.) Tighten all hardware securely and verify the housing is centered and firmly mounted before installing the tarp system.
